

DEPENDABLE, LEA APPROVED, SCHOOL INTERNET SOLUTIONS FROM PYRAMID VALLEY

Take full control of what staff and pupils view through a simple web interface

Pyramid Valley and Exa Networks are one of the few business and education only Internet Service Providers (ISP's).

We offer a full range of services to both state and private schools. Our products include SurfProtect, our own LEA approved filtering system, and Pupil Mail a safe email system for both pupils and teachers. We also provide non-contended ADSL connectivity, remote back up's and the ability for staff to work from home.

If Broadband is something you currently have, or are looking to upgrade to, then Exa's Broadband services are rated as one of the best in the UK; beating off the rest of the UK Internet Industry in the 2006 ISPA awards. The highest accolade in the UK Internet industry.

Web content filtering should be important to you! Exa has its own LEA approved content filtering system called SurfProtect. SurfProtect is operationally managed by Exa so there is no maintenance or updates to worry about. What makes it even better; it is completely free with any of Exa's connectivity options. As well as standard web filtering, SurfProtect automatically forces safe searching through search engines such as Google for text and images. Through a simple and intuitive web interface you have full control over which sites are viewable and which are banned, all in real time.

Another reason for using Exa's services is our Pupil Mail system. A web based email product that has large easy to navigate user friendly icons and has been designed from the ground up as an easy introduction to email for younger children (up to 13). As well as being easier to navigate, it also provides a safer environment too as part of our SurfProtect family of services. Pupil Mail also includes word filtering which intercepts any mail thought to have inappropriate words contained within the text.

Spam and word filtering for your email.

Reliable ADSL internet connections.

An exact replica of the email is then sent to a designated member of staff so appropriate action can be taken if required. Pupil Mail also includes our enterprise level Spam Filtering and Virus checking as standard. Our range of non-contended higher speed "Business Band" products are also ideally suited to schools; especially for those which require greater upload speed than a standard ADSL connection can provide. This is perfect for schools that want to promote staff or pupil network access from home by uploading content to Virtual Learning Environments (VLE's), host web / mail servers internally or for video conferencing.

Nominated as one of the UK's best ISP's by ISPA every year since 2003, Exa's staff have been involved in the education side of Internet provisioning since 1998, and have helped provide fast dependable internet services to schools throughout the UK for the past decade.
