### Stop worrying about losing vital information.

Our cost-effective automated back up and restore services store everything for you, and get your network back up and running fast if there's a problem.

When you're responsible for a whole school network, you've got to have systems in place that ensure files just can't be lost, and that if the worst happens, you can get your information back fast.

We'll advise you on the best option for your school. Whichever option you choose, we'll make sure that data security becomes one less thing for you to worry about.

### Easy to use

All our systems are straightforward to install, with backups then working automatically in the background. In the event of a problem, you can restore your data with just a few simple clicks.

### Totally secure

Whether you choose on-site or off-site storage, your information is totally secure. Data backup services are fast and effective, protecting you against loss through fire, theft, equipment failure, human error, vandalism or virus attack. If you choose off-site storage, your data is stored in two separate data centres, so even if one data centre fails, your information is still safe.

StoreIT from Pyramid Valley is available in 2 different versions.

### Remote Backup Services

Our remote only solution provides for extremely cost-effective data backup, you select what data you want to be backed-up and then our software will do the rest for you.

At regular intervals throughout the day the backup software will copy new and changed information from your systems to our master server based in Manchester. Once all the data has been received by our server, it is automatically replicated to our backup data server, ensuring your data is safe and secure at all times.

To restore your data you simply browse to a simple web interface, select the files you want to restore and click the restore button.

### Local Store with Remote Replication

As your data storage requirements grow, or if you have a regular requirement to restore large volumes of data, you may benefit from our enhance service. All data is backed up locally to a network storage device, and is replicated to our servers.

However if you ever need to restore data in a hurry, or have a requirement to restore a large volume of data, the local backup server is always ready and waiting to recover your required files.
